

## ecosio.ERPEL

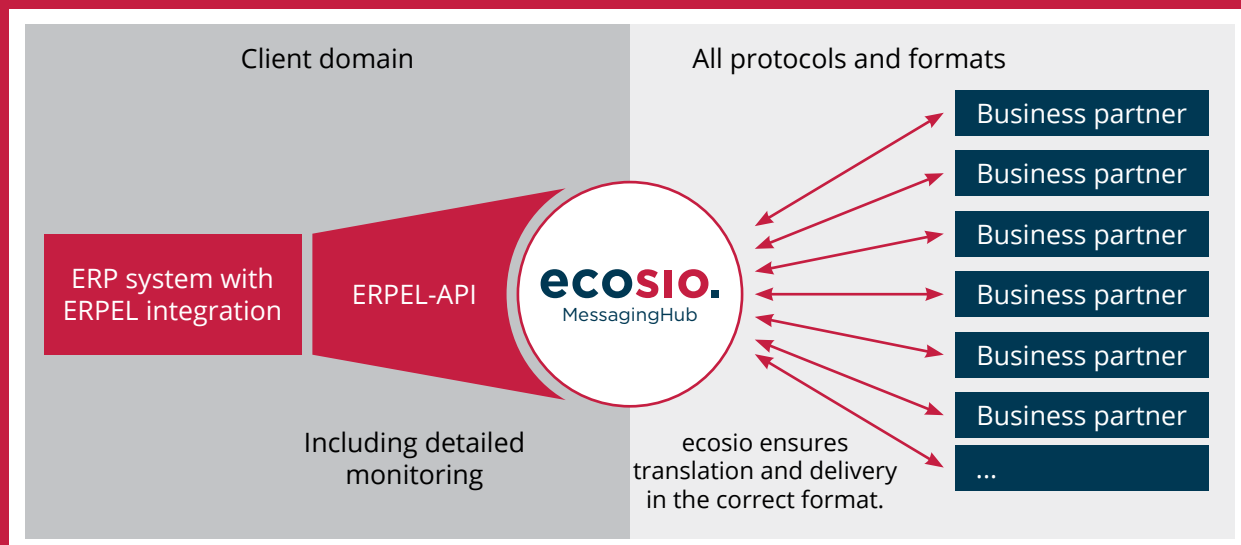

ecosio's solution for networking ERP systems makes your company 100% EDI ready.

### Do you speak ERPEL? Direct communication between ERP systems

ERPEL (ERP Exchange Language) is ecosio's leading EDI innovation. ERPEL makes it possible to connect your ERP system to your business partners via EDI, using direct integration, a single standardized transmission channel, and a unified document format.

In order to integrate the ecosio.ERPEL functionality in an ERP system, ecosio provides a modern REST-API that allows ecosio.ERPEL's complete scope of functions to be seamlessly integrated in the ERP system's user interface. Numerous ERP software systems are already available using the ERPEL interface, including SAP, Microsoft Dynamics, BMD, myFactory, and SAGE, just to name a few. An overview of all ERP providers with ERPEL integration can be found at [ecosio.com/en/erp-integrations/](https://ecosio.com/en/erp-integrations/).

ecosio.ERPEL makes your ERP system capable of exchanging messages in all formats and established protocols. The conversion and transmission of messages to your business partners, and vice versa, takes place using the ecosio.MessagingHub.

### We offer

- ONE connection for all EDI partners
- Fast and easy connection processes
- Trouble-free EDI partner connection, from setup to maintenance
- Monitoring of all incoming and outgoing messages by the ecosio team and directly in your ERP system

### Why EDI with ecosio?

ecosio.ERPEL clients can depend on ecosio to manage the complete set up of EDI connections, administration, and central monitoring. The ecosio.ERPEL API is used to integrate the EDI functionality in your ERP system, and your business partners can be connected using AS2, X.400, SFTP, OFTP2, IMAP/SMTP or RESTful API.

An ecosio expert is always available to develop concepts and solve problems. Highest quality personal support is our trademark, and quick reaction times and utmost dependability are a given.

## ecosio.ERPEL advantages

- ERPEL is integrated as a native feature in your ERP system's user interface
- With ERPEL, your ERP system speaks and understands all formats and established protocols
- Highly automated solutions based on EDIFACT, VDA, XML, CSV, fixed-length-text, etc.
- Secure and encrypted message transmission
- Only minor adaptations necessary before the interface is ready to use
- Prefabricated interfaces available for market-leading ERP systems
- ecosio experts offer professional and personal client support
- Competent support for the activation of EDI suppliers
- High reliability guaranteed through redundant systems and daily system checks
- ecosio team provides continuous message monitoring
- 24/7 supervision and proactive information in case of system error
- No in-house EDI know-how necessary
- Low entry costs and cost efficiency due to pay-per-use
- Large savings potential in comparison to existing X.400 contracts

### Functions:

#### Routing – the navigation system for your messages

Let us worry about your business partners' transmission protocols. You always send and receive messages using the same connection. We pick up and deliver messages – and you can check on the status of every one of them in your ERP system.

#### Conversion – We speak every language

Another of our services is message conversion: you send all messages to the ecosio.MessagingHub in the same document format, and incoming messages to you are always forwarded in the same format, as well. ecosio.MessagingHub takes care of format "translation".

#### Digital signature – There is only one original

If a business partner requests a signature on an EDI message, or if a signature is required according to local legislation, ecosio.MessagingHub can furnish an appropriate signature for all messages. Message signature guarantees authenticity of origin and the immutability of message contents.

#### Archiving – Your data is in good hands

By default, messages are stored for at least three months on the ecosio.MessagingHub. On request, the message storage period can be prolonged to ensure fulfillment of the archiving requirements for electronic messages, especially invoices.

#### Monitoring with ecosio.ERPEL

With ecosio.ERPEL, all monitoring data can be retrieved from ecosio.Monitor directly from your ERP system, meaning you get end-to-end monitoring of all EDI messages in real time and in your standard user interface.
